Our delivery team can bring your new furniture straight to your home. But first, we need some help to ensure we can get your items through the door and into place.

Before you start...

Jot down the dimensions of your chosen product, as you'll need to refer to these when measuring your space. Find these on our website in the Dimensions section of your item.

Doorways

Open your door as wide as possible and measure the distance between the outer edge of the door to the inner edge of your doorframe at its narrowest point. Allow for some wiggle room as we may need to take the item through on its side.

Lifts

If we need to use a lift to get into your building, measure the open-door height, width and depth to ensure it will fit.

Hallways

Measure the width of any areas that the furniture must pass through. Use the narrowest points and note down possible obstructions, such as heaters, skirting boards and light fittings.

Stairways*

Measure the width of the staircase at its narrowest point, taking any handrails and any light fixtures into account. If we need to lift items over a banister, check the distance between the banister and the ceiling. There should also be enough room on the landing for us to maneuver your items around any corners. **Excludes Heavy Classified Items.**

**Handled on a case by case basis for 2nd floor delivery depending on accessibility. Please discuss with our friendly showroom staff.*

Tips for measuring your space

- Some items can be broken down into separate modules, which makes them easier to transport. If you're not sure, ask our team — we're happy to help!
- Buying a sofa? Check if the legs are detachable. If not, you'll need to consider the total height (including the legs) when taking measurements.
- Use masking tape to lay out the furniture in your desired room to see how it will fit.
